## MSAWS - Week 1 Quiz

Type : Graded Quiz

Attempts : 3/3

Questions : 10

Time : 30m

Scoring Policy : Highest Score

**Due Date** : May 25, 11:00 PM

**Your Score** : 25/25

Instructions

## **Attempt History**

Attempt #3

Marks: 22.50

May 22, 6:09 PM

Attempt #2

Marks: 25

May 22, 5:45 PM

Attempt #1

Marks: 25

May 22, 5:33 PM

Q No: 1 (Correct Answer)

In a multi-AZ environment, RDS

O None of these	
Automatically creates a secondary DB in another AZ at the time of creation	You Selected
O DB is created should be manually created in 2 AZ	
OB has to be created in an AZ and then copied manually into anot	her AZ
No: 2 Correct Answer  Which cannot be an endpoint for SNS?	
VPC	You Selected
○ SMS	
○ Email	
O Lambda	
No: 3 Correct Answer  Veb application firewalls	
O Is used to restrict all traffic to a private subnet	
O All of these	
O Is used to access private subnets from web	
Is used to find out hack attempts	You Selected

What	is true for SNS and SQS?
	SNS is a push based while SQS is a pull based notification model  You Selected
0	SNS and SQS are push based notification models
0	SNS and SQS are pull based notification models
0	SNS is a pull based while SQS is a push based notification model
Q No: Pick tl	5 Correct Answer he correct statement
0	Filters are ANDed and Conditions are ORed
0	Both Filters and Conditions are ANDed
	Filters are ORed and Conditions are ANDed  You Selected
0	Both Filters and Conditions are ORed
Q No:	
	6 Correct Answer
	6 Correct Answer is the advantage of using Athena over RDS?

data is	nation:Athena provides a serverless environment powered by AWS Glue, whe s retrieved from an S3 bucket and is priced based on the number of queries ru mount of data processed, rather than the total amount of data in the bucket.	
) No: 7		
	of the queue ensures the delivery of a message exactly once?  You	Selected
() N	None of these	
ОВ	Both of these	
○ St	tandard Queue	
No: 8 ou haveplica in		down. itabase
No: 8 ou have eplica in Vhat st	Correct Answer  The created an RDS instance with a standby in a different availability zone and a different region. Consider that the region with the primary instance goes the teps would be taken to prevent service outage to any application using the data create a new primary instance using the last snapshot taken and use it as the region.	down. itabase
No: 8 ou haveplica in What st	Correct Answer  We created an RDS instance with a standby in a different availability zone and in a different region. Consider that the region with the primary instance goes teps would be taken to prevent service outage to any application using the data create a new primary instance using the last snapshot taken and use it as the rendpoint.  Use the endpoint of the standby backup instance	down. itabase

Firewalls	You Selected
Availability zone	
O SNS	
O sqs	
there is a problem processing a message it goes to the	You Selected
there is a problem processing a message it goes to the  Standard Queue	You Selected
